WE ARE MALFINI

Dear customers and business partners, thank you for the trust you place in us.

For over a quarter of a century, we have been striving to do things simply but honestly. From our first T-shirts to our current portfolio containing hundreds of products, our work is based on three pillars that stand the test of time: quality, reliability and responsibility.

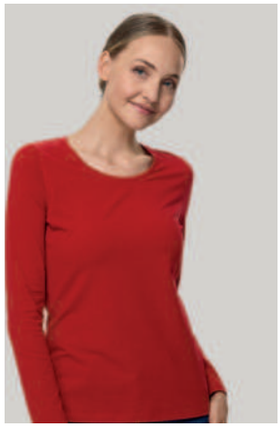

This catalogue is not just about products. It is at once a report on where we have moved as a company, and what innovation, customer care and sustainable development mean to us. We want it to support you – whether you are looking for a proven foundation, a way to create something unique or inspiration to take your brand further.

We believe that you will find what you need in it.
And if you have any questions or ideas, we are here for you.
Ready to help you, in person and with respect.

Kind regards,

Your MALFINI team

160 g/m²
Single Jersey, 100 % SUPIMA® cotton

- the finest SUPIMA® cotton
- slim fit cut with side seams
- narrow 1:1 rib knit neckline hem with 5 % elastane
- contrast elements

Extra soft T-shirt made of SUPIMA® cotton. The premium long-fiber material retains its shape, is smooth, soft, and stays pretty even after years of wear.

00 A4 01 02 83 93 A3 71

SUPIMA®
WORLD'S FINEST COTTONS

Not all cottons are created equal. Supima cotton is a superior type of cotton grown in the USA. It represents less than 1% of cotton grown in the world. What makes Supima unique to other cottons is the extra-long staple fiber that gives the cotton its premium properties: Strength, Softness and Color retention.

MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers. The reason for these qualities is the size of an individual fiber – and merino wool fibers are very fine, thinner than 18 microns. Lightweight functional T-shirt made of merino wool naturally responds to temperature changes, absorbs odors, and is easy to maintain. Available with short or long sleeves.

MERINO RISE

T-shirt men's 157 • women's 158

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother, shinier, and softer. Mercerization results in higher strength and better color stability of the material.

- pockets with coil zipper
- bottom hem adjustable by elastic drawstring
- contrast elements
- woman's: slight fit cut

24 01 02 05 44 92 07 40

ANTIPILLING

ANTIPILLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

527: S size available in colours 01, 02

NANOTEX®
AQUAPEL™

Certified material that has been modified with the environmentally friendly Nanotex Aquapel PFAS free treatment.
The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

RIMECK®

WORKWEAR MADE REAL

The RIMECK® brand effectively melds the rigorous demands of workwear with the latest fashion trends. Our products not only look great but also withstand the rigours of everyday wear. Each piece must satisfy four essential criteria - striking design, meticulous craftsmanship, top-quality materials, and a primary focus on your safety. Rest assured, we are committed to this principle.

LUXURY COLLECTION BY RIMECK®

The VERTEX collection combines technologically advanced fibers, comfort and an outdoor look. Workwear can thus be highly durable, flexible and stylish at the same time!

CERTIFICATION - W07

EN ISO 13688:2013/A1:2021 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, wearout, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

WATER RESISTANT TREATMENT (W55)

The waterproof TPU membrane resists moisture penetration very well while maintaining the flexibility of the entire material. Water column 10 000 mm.

BREATHABLE MATERIAL (W55)

The 3-layer material helps to regulate water vapour, reliably moving it away from the body and creating a feeling of comfort. Breathability of 4,000 g/m^2/24 hours.

THERMAL REFLECTIVE ZONE (W55)

Thermo reflective zone on the back.

ANTI-SOILING FINISH (W07)

The ability of the top material to repel liquid, dirt and greasy dirt.

CERTIFICATION
of RIMECK work clothes

Selected garments from the collection HIGH VISIBILITY (HV) Rimeck correspond to the international standards, which determine the optimal form of protective Plaining with high visibility. Certified garments from the HV collection are supplied with a leaflet providing information on proper storage, treatment and purpose.

EN ISO 20471:2013/A1:2016 – High visibility Plaining – this international standard specifies requirements for Plaining with high visibility, which is able to visually indicate the presence of a user for vehicles or other mechanized means of transport under any light conditions, both in daylight and when illuminated by headlights of vehicles at night.

High visibility Plaining are made of fluorescent material, and in combination with reflective stripes are divided into three categories:

Category 3 – the highest level of protection – the minimum required substrate surface is 0.80 m^2 and 0.20 m^2 of retroreflective material.

Category 2 – the medium level of protection – the minimum required substrate surface is 0.50 m^2 and 0.13 m^2 of retroreflective material.

Category 1 – the minimum level of protection – the minimum required substrate surface 0.14 m^2 and 0.10 m^2 of retroreflective material.

EN 1150:1999 – Protective Plaining – caution Plaining with high visibility for non-professional use – standard specifies requirements for optical properties of caution high visibility Plaining suitable for adults or teenagers, not for professionals. The garments are designed for visual indication of the presence of users in all light conditions, both in daylight in urban lighting and when illuminated by headlights of vehicles at night.

EN 343:2019 – Protective clothes – Rain protection - European standard determining the properties of fabrics and seams of a protective garment. The chracteristics of these are measured for the outside of the clothes. After achieving the specific permeability requirements and reaching the appropriate certification, it provides protection against water penetration and resistence against steam penetration for the wearer.

EN ISO EN ISO 13688:2013/A1:2021 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

TYPE 2 – foam plastic or other filling material in trouser pockets, or permanently attached to trousers.

LEVEL 0 – only suitable for use on a flat surface - does not protect against punctures

LEVEL 1 – suitable for use on flat or uneven surfaces - protection against puncture with a force of at least 100 ± 5 N

LEVEL 2 – suitable for use on flat or uneven surfaces in demanding conditions - protection against puncture with a force of at least 250 ± 10 N

MATERIALS
fabric and finishes

NATURAL MATERIALS

COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India, the USA and China.

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

MERINO WOOL

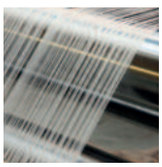

Active fiber that regulates body temperature changes and is one of the most breathable natural fibers. The fiber can absorb large amounts of moisture – along with odour molecules in the sweat. Natural elasticity maintains dimensional stability, and the fabric is easy to maintain

VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorption features. Compared to cotton, it is softer, shinier and finer.

SYNTHETIC MATERIALS

ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as polyester. Mechanical and chemical treatment influences the final product ´s properties.

POLYETHYLEN

Currently the most widely used polymer in the world, characterized by high strength, friction resistance, zero moisture content and chemical resistance. Thanks to its properties it is ideal for the production of safety protective equipment protecting against mechanical influences and wear.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production, they leave a lower carbon footprint and reduce environmental pollution. By recycling we achieve the same quality and properties as with ordinary polyester.

POLYACRYL

Acrylic/polyacrylic is a wool-like synthetic fiber produced by polymerizing acrylonitrile. Final products are durable, soft, flexible and warm, but unlike wool, they are hypoallergenic, light, quick drying, easier to maintain and wrinkle-resistant.

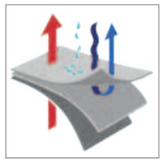

BRANDED MATERIALS

SUPIMA®

Not all cottons are created equal. Supima cotton is a superior type of cotton grown in the USA. It represents less than 1% of cotton grown in the world. What makes Supima unique to other cottons is the extra-long staple fiber that gives the cotton its premium properties: Strength, Softness and Color retention.

NANOTEX® AQUAPEL®

Certified material that has been modified with the environmentally friendly Nanotex Aquapel PFAS free treatment. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

SOFTSHELL

Softshell is a laminated textile for modern and sports plain weaveing and plain weaveing for outdoor activities. It is divided into membrane and nonmembrane. Plain weaveing made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

3M™ STRIPES

3M retroreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3M™ technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm^2 of the fabric there are up to 30,000 glass beads.

SEGMENTED STRIPES

Retroreflective stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

BIONIC-FINISH® ECO

Environmentally friendly and highly durable hydrophobic textile finish based on proprietary technology that improves the functional properties of the fabric: repels impurities, it is breathable and better resists adverse weather conditions.

FABRICS

SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

PIQUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and plain weaveing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and plain weaveing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

DOUBLE FACE INTERLOCK KNIT

Double face knitting also called double-sided. The weave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction.

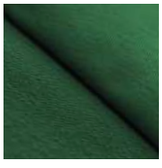

GRID KNIT

Quick-drying, breathable knit for the production of modern, functional clothing. The special grid structure perfectly moves moisture away from the body and expands it onto the fabric surface for fast drying, making it feel fresh, dry but also cooling the body. High elasticity ensures maximum comfort during wear.

RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 1:1 or 2:2. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts.

FRENCH TERRY – NOT BRUSHED

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strength, absorption as well as the volume of the fabric.

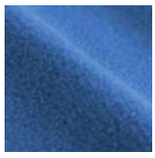

FRENCH TERRY – BRUSHED

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has antipilling finish.

FLEECE

Weft-knitted fabric characterized by a dense, brushed, and teased soft surface on both sides. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with antipilling finish. Products are suitable for embroidery and laser engraving.

PLAIN WEAVE

Plain weave fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Plain weave fabrics are manufactured from high quality combed cotton or polyester.

POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough. It is made by a plain weave which has a higher amount of warp than weft threads.

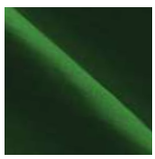

MICRO TWILL

The use of two-fold yarn with a high density of 100/2 results in a very fine threading. This creates a thin, but effective diagonal lines that gives the twill weave an elegant and modern look. It is a popular non - wrinkling fabric with high breathability and soft feeling.

OXFORD

Weave derived from canvas. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic yarns.

RIP STOP

Very strong regularly repeating weave. In this smoth fabric are interwoven thick warp and weft treads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

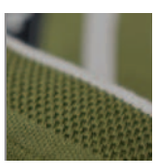

TWILL

Weave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill weave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matte appearance.

TERRY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton.

JACQUARD KNIT

Very interesting plastic patterns can be achieved using the jacquard technique in a combination of two colors. We call regular patterning, which has a different reverse side and the obverse side is made up of visible eyelets, "birdseye". Due to its strength and stability in shape, this pattern is suitable for use on cuffs or collars and at the same time underlines the high quality and luxury of the product.

FINISHES

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

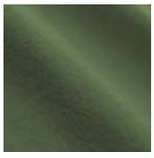

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother, shinier, and softer. Merceration results in higher strength and better color stability of the material.

SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

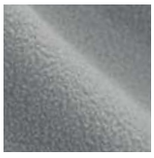

ENZYME WASH

The purpose of an enzyme wash is to reduce loose fibers on the surface of the fabric and improve its touch and appearance. For this type of treatment, an organic-based compound is used which is added directly to the dye bath. This procedure significantly reduces the amount of energy required during the process.

EASY CARE

The surface finish based on modification of the cotton fiber cellulose, which increases the flexibility of the material. It prevents the creases while wearing and washing cycles, thereby reducing wrinkling, easier ironing, shape stability and dimension stability.

ANTIPILLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric´s pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

PU FINISH

A long-lasting polyurethane layer that is applied from one side of the base fabric. It provides water, moisture resistance, abrasion and dirt resistance. Due to the special composition, the layer is very flexible, lightweight and does not negatively affect the other properties of the product.

PA FINISH

Acrylic treatment is used to improve the mechanical and practical properties of the fabric. It is mainly used in outdoor clothing and is characterized by wind resistance and tensile strength.

TPU LAMINACE

Durable top layer made of thermoplastic polyurethane ensures stability of material properties in a wider range of conditions. The combination of the TPU membrane and the top material maintains the flexibility of the product and provides waterproof and abrasion resistant surface with excellent bend and tensile strength.

SILVER COATING

A special matte silver coating applied from the inside of the fabric improves the functional properties of the material. It increases water resistance, prevents transparency of the top material and increases resistance to damage potentially caused by washing.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt, which you will appreciate especially in the work environment. Dirt or grease forms droplets on the treated fabric, which can be easily wiped off, thereby extending the product's lifespan.

WATER REPELLENT FINISH

Special surface finish preventing the penetration of moisture and fabric absorbency, which improves its functional properties - water simply runs off the surface in the form of small drops.

LEGEND

NEW PRODUCT

NEW PRODUCT
For information about stock availability please contact our sales department.

NEW COLOUR

NEW COLOUR
For information about stock availability please contact our sales department.

ELASTANE

ELASTANE
A synthetic fiber that contains polyurethane bonds of high elasticity.

ORGANIC

ORGANIC
Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes.

MERINO

MERINO
Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers.

SOFTSHELL

THREE-LAYER SOFTSHELL
Three-layer softshell with membrane

SOFTSHELL

DOUBLE-LAYER SOFTSHELL
Double-layer softshell

RECYCLED

RECYCLED POLYESTER
The fibers are made by recycling consumer plastics.

TEAR OFF

TEAR OFF
Tear off label.

STICKER

STICKER LABEL
Label in a form of a sticker. Can be easily taken off.

LABEL FREE

LABEL FREE
The products have only a small size label behind the neck for easy rebranding

FLAT

FLAT SEAMS
Double-sided cover stitch which is flat ensures maximum wearing comfort.

TAPED

TAPED SEAMS
Technology supporting the waterproofness of material at seams. The waterproof tape is applied thermally under pressure over the inside seams.

4-WAY STRETCH

4-WAY STRETCH
Material flexible in all directions for maximum freedom of movement and long-lasting shape stability.

WINDPROOF

WINDPROOF
Windproof material prevents wind and chills from penetration.

WATERPROOF

WATERPROOF
Rating in milimetres to indicate material's resistence to water pressure. The higher the water column is, the longer the fabric will remain waterproof.

EXTRA DRY

EXTRA DRY
Extra dry material.

BREATHABLE

BREATHABLE
Rating in g/m^2 per 24hours. The ability of a fabric to allow moisture vapor in grams in square meter per day. The higher the value is, the better fabric breathes.

COOL/WARM

COOL/WARM
Soft, easy care, quick-drying and conductive fabric.

REGULATION

THERMOREGULATION
Keeps you warm when it's cold and reversed.

ODOR RESISTANT

ODOR RESISTENCE
Thanks to moist absorption it keeps sweat out of your skin and therefore it's antibacterial. The clothing stays fresh longer.

SILICONE

SILICONE FINISH
The silicone finish is similar to the effect of fabric softner, however more lasting. It makes the product soft to the touch, more dirt-proof and the prints hold much better.

ENZYME

ENZYME WASH
This treatment results in a shiny and soft surface that is also resistant to pilling.

ANTIPILLING

ANTIPILLING FINISH
The antipilling finish lowers the pilling tendency of the fabric.

ANTI-SOILING

ANTI-SOILING FINISH
The ability of the top material to repel liquid, dirt and greasy dirt.

WATER REPELLENT

WATER REPELLENT FINISH
Special finish against the penetration of moisture and fabric absorbency.

EASY CARE

EASY CARE
Surface finish eliminates fabric wrinkling to provide product easy care.

3 IN 1

3 IN 1
Multi use jacket can be worn as one whole winter jacket, or separately as a windbreaker and a fleece.

4 IN 1

4 IN 1
Multi use Hi-Vis workwear jacket can be worn as one whole, upper and inner part separately, or just the upper jacket without sleeves as a vest
